

TRENT EDWARDS

Operations Analyst | SQL, Tableau & Operational Analytics

Puyallup, WA | (602) 705-1189 | Tleinaz@ymail.com

[Portfolio](#) | [Tableau Public](#) | [GitHub](#) | [LinkedIn](#)

POSITIONING STATEMENT

Operations-focused Data Analyst with a background in mortgage underwriting support, workflow reporting, and operational prioritization. Experienced using SQL, Tableau, Excel, and AI-assisted workflows to transform complex pipeline data into actionable business insights supporting operational visibility, risk identification, and decision-making. Brings experience from metrics-driven environments involving workflow analysis, performance reporting, and cross-functional operational support.

SKILLS & TOOLS

SQL (MySQL) | Tableau | Excel (Pivot Tables) | Python (Pandas) | Data Visualization | Dashboard Reporting | Workflow Analysis | Operational Reporting | KPI Reporting | Mortgage Operations | Business Process Support | GitHub | Tableau Public

ANALYTICS PROJECTS

Mortgage Pipeline Risk & Prioritization Analysis (SQL, Tableau)

- Developed an end-to-end mortgage pipeline risk analysis identifying aging loans, disclosure risks (LE/CD), and workflow bottlenecks impacting operational efficiency.
- Designed a repeatable SQL-based analysis framework transforming raw pipeline data into structured, actionable operational insights.
- Built Tableau dashboards highlighting priority tiers (Critical/High/Medium), loan aging, and workflow risk drivers supporting prioritization and operational visibility.
- Translated business questions into validated SQL logic aligned with real-world operational definitions of urgency and risk.
- Extended the analysis through stage-level bottleneck investigation, identifying that Medium-tier loan aging was concentrated in late-stage processing areas such as Clear to Close and Closing Scheduled, suggesting normal pipeline accumulation rather than true operational delay.
- Leveraged AI-assisted workflows to accelerate analysis, dashboard refinement, and insight generation while maintaining analytical accuracy and control.

Mortgage Loan Approval Analysis (SQL, Tableau, Python)

- Analyzed mortgage loan datasets across income levels, loan sizes, and geographic regions to identify approval trends and lending risk patterns.
- Performed data cleaning, transformation, and feature engineering using SQL and Python.
- Created segmentation models for income bands and loan size categories to support comparative approval analysis.
- Built Tableau dashboards visualizing approval trends, regional comparisons, and lending-risk indicators.
- Identified higher approval likelihood among higher-income borrowers and smaller loan-size segments.

RELEVANT PROFESSIONAL EXPERIENCE

loanDepot — Underwriting Support Specialist / Software Support | 2020–2022

- Provided operational and system support for mortgage underwriting teams within a high-volume lending environment.
- Collaborated with developers to resolve workflow and system issues impacting loan processing operations.

- Supported underwriting staff through troubleshooting, workflow guidance, and best-practice process support.
- Managed 20–30 daily support requests while meeting service-level expectations in a fast-paced operational environment.
- Recognized twice as Top Support Employee of the Month for operational support performance.

Bank of America — Client Advocate / Underwriter / Subject Matter Expert (SME) | 2013–2016

- Supported underwriting operations through pipeline management, condition review, and appraisal approvals.
- Developed underwriting priority reports used to monitor aging loans, workflow urgency, and operational prioritization.
- Led contractor onboarding workflow validation activities to ensure loan file readiness and documentation completeness.
- Maintained workflow continuity and operational coverage during team absences.
- Selected as SME to train vendor associates on mortgage workflows, underwriting support procedures, and operational best practices.
- Supported workflow coordination and loan prioritization across multiple processing teams.

Caliber Home Loans — Business Analyst / Loan Processor | 2016–2017

- Managed daily mortgage pipeline operations and resolved workflow and system issues.
- Supported operational efficiency through cross-functional coordination and issue resolution.
- Assisted with company-wide system upgrades and process transition activities.

EDUCATION

B.A., Communication Studies — Arizona State University

A.A.S., Network Operations & System Security — Clover Park Technical College

COURSES & CERTIFICATIONS

CompTIA Network+

Data Science Infinity — Operational Analytics / SQL / Tableau / AI-Assisted Analytics Coursework

ADDITIONAL EXPERIENCE

Broadcast radio leadership experience including Production Director, Music Director, and Assistant Program Director roles within ratings-driven environments involving audience metrics, trend analysis, operational coordination, staff oversight, and performance-focused decision support.
